

## SCImago JournalRank (SJR)

SCImago JournalRank (SJR) is a ranking calculated annually for journals indexed in Scopus database. Calculations are similar to those of Journal Impact Factor but are normalised for fields that don't cite much, and citations are weighted on the prestige of the citing journal. For this reason the Scimago quartile can often be higher than the JIF quartile for the same journal.

Scimago is a free resource available at [www.scimagojr.com/](http://www.scimagojr.com/)

Use Scimago when a JIF is not available, or when investigating across different fields and a publication is indexed in Scopus.
